Dear Mr. Snow,

In response to the revised CALFED plan of raising existing dams or building new offstream storage reservoirs, I am wholeheartedly opposed. There would be flooding of upper Sacramento and McCloud rivers and result in massive water diversions of the Sac. River.

By switching to higher value and less water consumptive crops, it would expand water efficiency and reclamation programs. The restoration goals you have proposed (removal of Englebert Dam) I do support.

More dams is not the answer.

Sincerely,
M. Colahan
